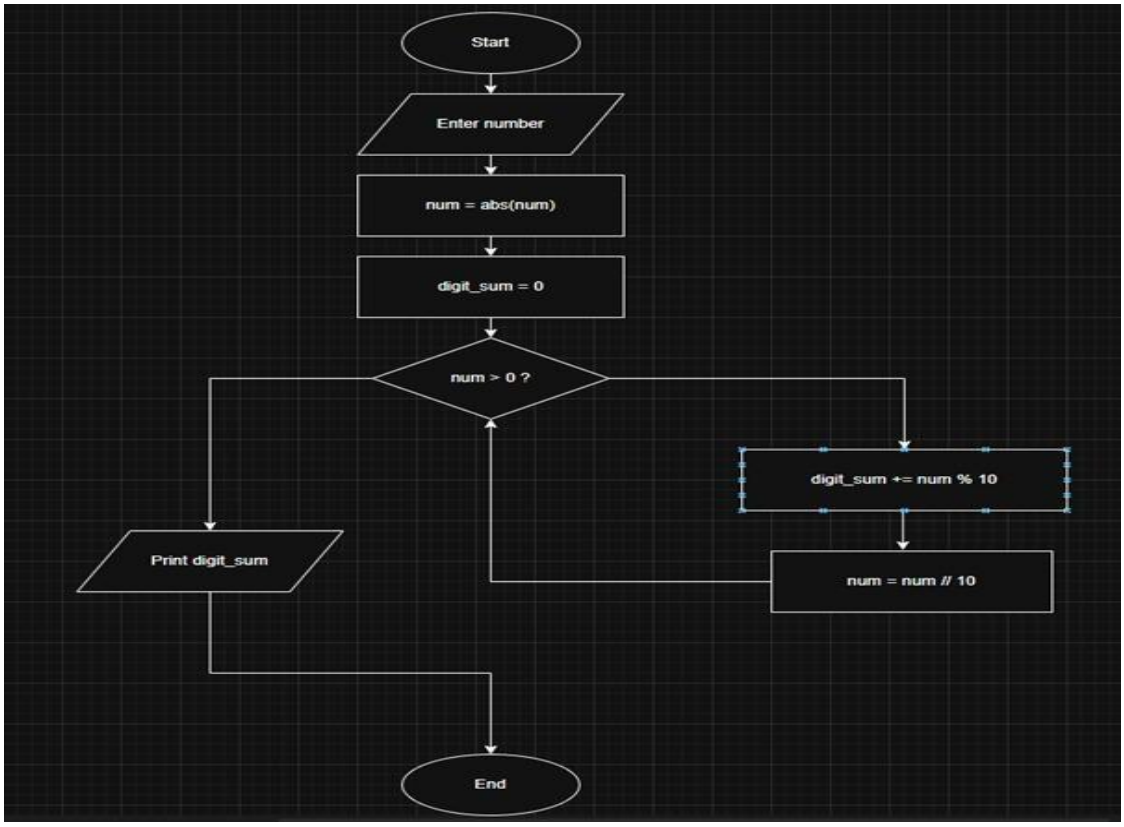
11.1.1 Sum of Digits of a Number

Algorithm :-

Step 1: Start the program
Step 2: Input an integer number from the user
Step 3: Initialize a variable sum = 0
Step 4: Repeat the following steps while num > 0
  Step 4.1: Find the last digit
    → digit = num % 10
  Step 4.2: Add the digit to sum
    → sum = sum + digit
  Step 4.3: Remove the last digit from number
    → num = num // 10
Step 5: Print the result
  → "Sum of digits: ", sum

Step 6: End the program

FLOWCHART



Start
Enter number
num = abs(num)
digit_sum = 0
num > 0 ?
digit_sum += num % 10
num = num // 10
Print digit_sum
End

11.1.1. Sum of Digits of a Number
Write a Python program that reads an integer, calculates the sum of its digits, and prints the result.
Input Format:
• The program reads an integer input with the prompt "Enter a number: "
Output Format:
• Print the sum of the digits in the format:
Sum of digits: <digit_sum>
Note:
• Some base code was provided (input and print statements). The task was to complete the missing logic.
Sample Test Cases
sumofdig...
Submit
num = int(input("Enter a number: "))
num = abs(num)
digit_sum = 0
while num > 0:
digit_sum += num % 10
num //= 10
print("Sum of digits:",digit_sum)
Average time
0.005 s
5.25 ms
Maximum time
0.012 s
12.00 ms
2 out of 2 shown test case(s) passed
2 out of 2 hidden test case(s) passed
Test case 1
Debug
Expected output
Actual output
Enter a number: 123
Sum of digits: 6
