5.1.2 Student Grade Based on Aggregate

Algorithm:

Step 1: Start the program.

Step 2: Input four integer marks: m1, m2, m3, m4.

Step 3: Calculate total marks: total = m1 + m2 + m3 + m4.

Step 4: Calculate aggregate percentage: aggregate = (total / 400) * 100.

Step 5: If aggregate > 75, assign grade = 'Distinction'.

Step 6: Else if aggregate >= 60, assign grade = 'First Division'.

Step 7: Else if aggregate >= 50, assign grade = 'Second Division'.

Step 8: Else if aggregate >= 40, assign grade = 'Third Division'.

Step 9: Else assign grade = 'Fail'.

Step 10: Print total marks.

Step 11: Print aggregate percentage (two decimal places).

Step 12: Print the grade.

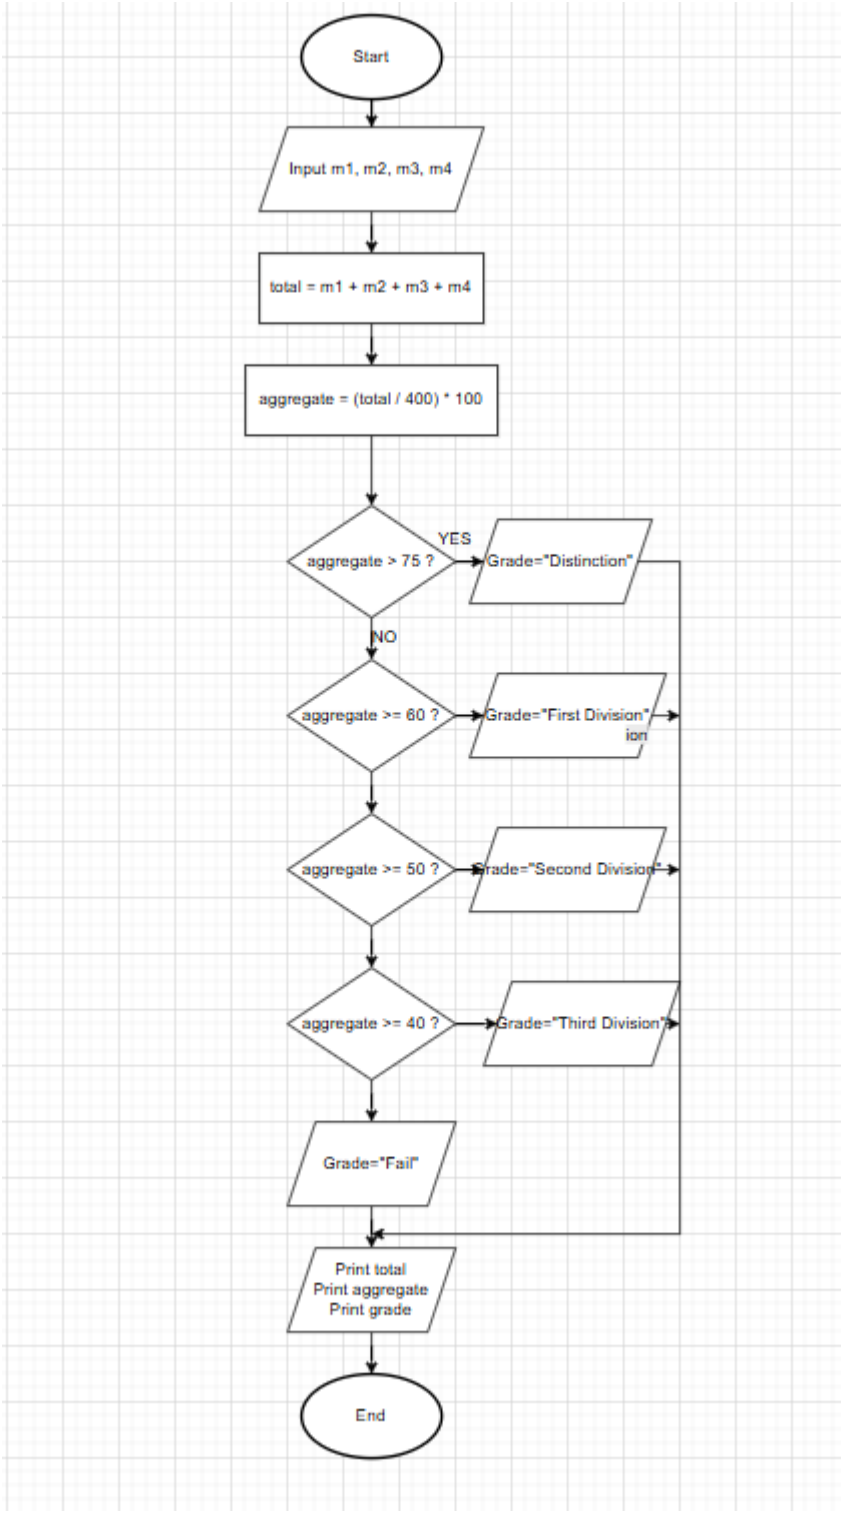
Step 13: End the program.

Code:

```
m1, m2, m3, m4 = map(int, input().split())
total = m1 + m2 + m3 + m4 aggregate =
(total / 400) * 100

if aggregate > 75:
   grade = "Distinction" elif
aggregate >= 60:    grade
= "First Division" elif
aggregate >= 50:
   grade = "Second Division" elif
aggregate >= 40:
   grade = "Third Division"
else:    grade = "Fail"

print(total) print(f"{aggregate:.2f}")
print(grade)
```



Start
Input m1, m2, m3, m4
total = m1 + m2 + m3 + m4
aggregate = (total / 400) * 100
aggregate > 75 ?
YES
Grade="Distinction"
NO
aggregate >= 60 ?
Grade="First Division"
ion
aggregate >= 50 ?
rade="Second Division"
aggregate >= 40 ?
Grade="Third Division"
Grade="Fail"
Print total
Print aggregate
Print grade
End

5.1.2. Student Grade Based on Aggregate

00:35

Write a program to calculate the total marks, aggregate percentage, and grade of a student based on marks in four subjects. The grade is determined as follows:

- Aggregate > 75%: Distinction
- Aggregate >= 60% and < 75%: First Division
- Aggregate >= 50% and < 60%: Second Division
- Aggregate >= 40% and < 50%: Third Division
- Aggregate < 40%: Fail

Input Format:

- Four space-separated integers representing the marks in four subjects.

Output Format:

- The first line should print the total marks.
- The second line should print the aggregate percentage with two decimal places.
- The third line should print the grade.

Constraints:

- 0<=marks in each subject<=100

Debugger

```python
marks = list(map(int, input().split()))
total = sum(marks)
aggregate = total / 4
if aggregate > 75:
    grade = "Distinction"
elif aggregate >= 60:
    grade = "First Division"
elif aggregate >= 50:
    grade = "Second Division"
elif aggregate >= 40:
    grade = "Third Division"
else:
    grade = "Fail"
print(total)
print(f"{aggregate:.2f}")
print(grade)
```
