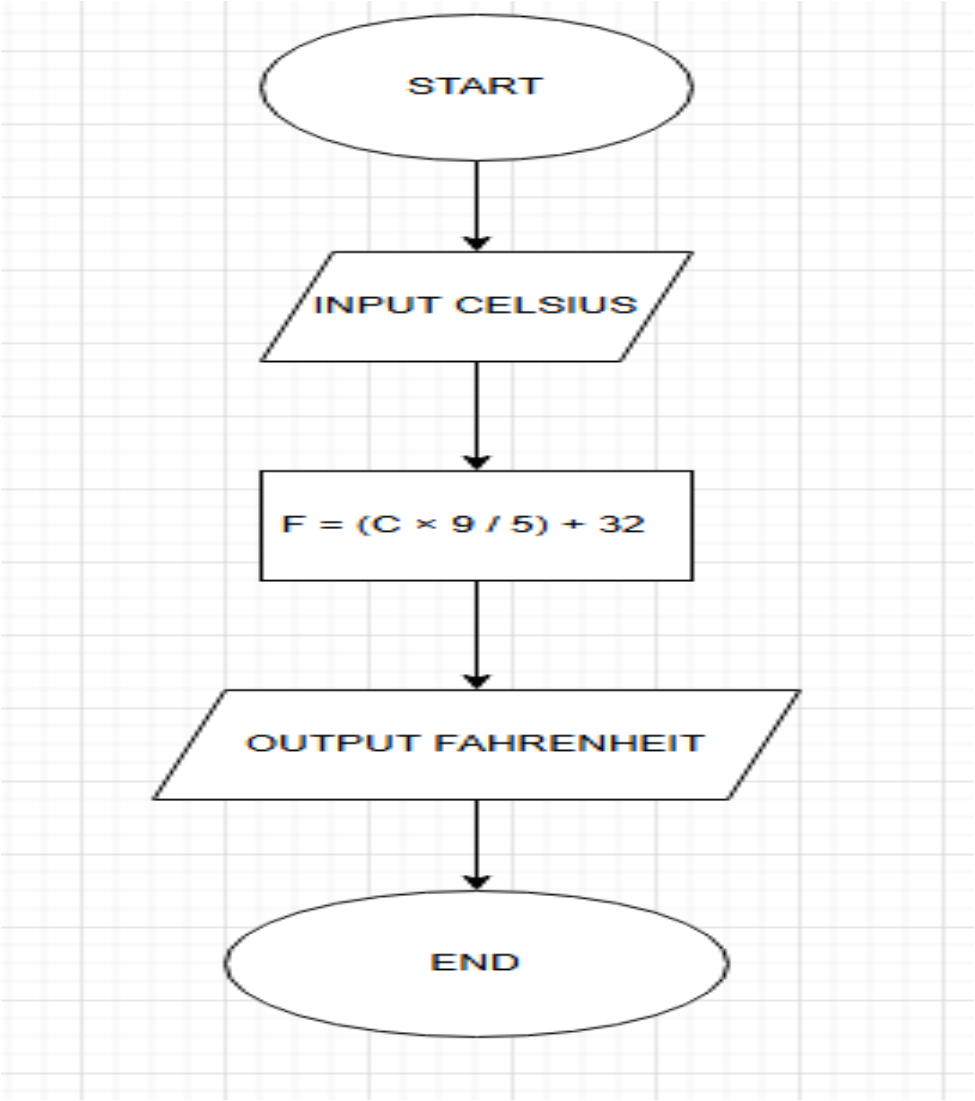
3.1.2 CELSIUS TO FAHRENHEIT

ALGORITHM

1. Start
2. Input temperature in Celsius (C)
3. Calculate Fahrenheit using the formula

   F = (C × 9/5) + 32
4. Display Fahrenheit value (formatted to 2 decimal places)
5. End

FLOWCHART



Code –

```
celsius = float(input())
fahrenheit = (celsius * 9 / 5) + 32
print(f"{fahrenheit:.2f}")
```
